

Cockroach Extermination Preparation Checklist

1. Be prepared to spend at least 1 to 2 hours away from your residence.
2. Thoroughly clean all kitchen and bathroom surfaces (appliances, floors, walls, countertops, etc.).
3. Remove all items from the cabinets and clean all surfaces with soap and water.
4. Remove all open or exposed food from the areas to be treated.
5. Vacuum thoroughly.
6. Cover fish and reptile tanks and turn off aerators.
7. Please **do not** use any 'over the counter' insecticide treatments, either before or after treatment. The repellent qualities of such sprays diminish the effectiveness of professional treatment and will spread the infestation to other parts of the home.

Also note . . .

Pet food should always be stored in sealable containers. Don't leave it out for extended periods of time, especially overnight. Cockroaches thrive on this high-protein food source, and will leave feces and insect parts in your pets' food.

Dirty dishes and trash provide food for cockroaches. Removing these food sources daily and keeping all surfaces clean is necessary to eliminate these pests.

We're here to help! Our purpose is to break the life cycle of these pests and to eliminate them from your home. Your cooperation is critical!
